Instructions for Using Designs

1. Tear out the design along the dotted line. You will note that the design pages are punched for loose-leaf binder as well as being perforated. This is for your convenience in filing the designs after they have been torn from this book.
2. Center the design on the metal.
3. Hold the design securely in place. Scotch tape is one of the best methods for doing this.
4. Insert carbon paper between the design and the metal. A soft pencil carbon or special metal carbon paper, if available, is recommended.
5. Trace the design on the metal. A hard pencil (about No. 5H) will produce best results.

Foreword

For some time it has become increasingly apparent to us that a widespread need for a book of art metal designs exists. Rarely has a day passed without a number of handicraft workers telephoning or writing for information concerning designs suitable for tracing on metal. Evidently it has been difficult to obtain single designs, much less an entire collection.

This book of "Art Metal Designs" is the result of these many requests. It is being offered at our publisher's cost of $.35 a copy even though worth far more because we believe that in this way it will serve a much larger handicraft audience. We have tried to select a wide variety of designs, easily traceable since they are full size and ordinarily will require no enlargement. It is our hope that these designs will prove popular with handicraft workers and that they will satisfy a great need.

Your attention is called to another Metal Goods publication, "Making Aluminum Trays and Coasters", which is offered free of charge. This booklet explains the forming and etching of aluminum trays and coasters step by step. If you don't already have a copy of "Making Aluminum Trays and Coasters" and would like to have one, just address your request to Metal Goods Corporation, Handicraft Department, 5239 Brown Avenue, St. Louis 15, Missouri. An inquiry to the same address will also promptly bring you, free of charge, our complete price list if desired.

Our service to you does not end when you get aluminum circles, other handicraft metal, "Handi-Jig" fluting tool, instruction booklet, book of designs or our complete price list. If you have any questions or problems concerning metal work we will always be glad to work with you on them.

We want to thank collectively the numerous handicraft workers who so generously permitted us to copy their best designs so that we could include them in this book. Their cooperation is indeed sincerely appreciated since we could not have produced the Metal Goods book of "Art Metal Designs" without their help.
